

BeyondID

Zero Trust Security IdP Assessment

BeyondID Zero Trust Security Assessment (ZTS) provides an individualized snapshot of your organization's security posture and a customized roadmap and strategy to move towards a more robust Zero Trust framework.

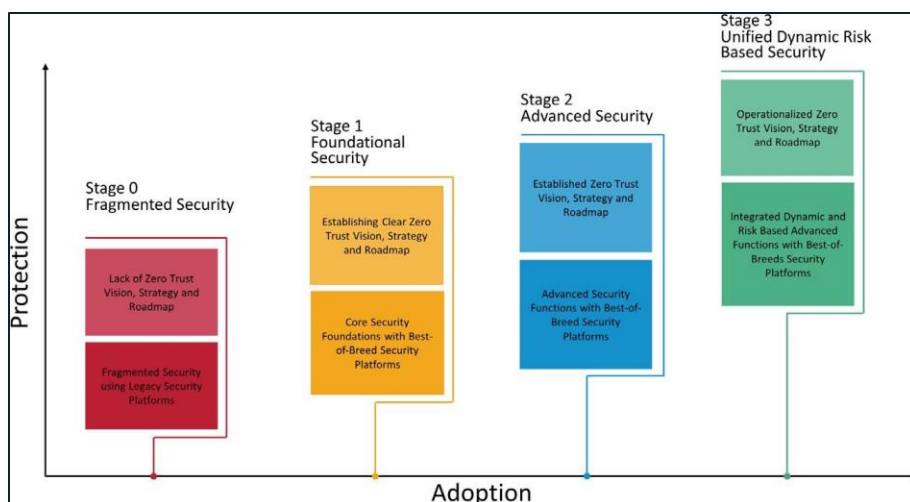

[CONTACT US](#)

Zero Trust Assessment helps your organization:

- Determine where you are on your Zero Trust journey (based on vision, strategy, roadmap, and capabilities)
- Assist in discovering the current cybersecurity posture and define its desired state
- Analyze gaps and develop a remediation plan that includes a series of recommendations and tailored roadmap to Zero Trust maturity
- Provide best practices, capabilities, and on-going Zero Trust reports
- Recommend actions to achieve or maintain higher stages of Zero Trust maturity

Improve Your Identity-First Security Posture

- > Build a solid Zero Trust vision, strategy and roadmap
- > Avoid costly data breaches and defend against cyberattacks
- > Ensure your workforce is secure, regardless of work location and devices
- > Streamline workforce and customer onboarding/offboarding
- > Secure applications, assets, data, devices and services
- > Implement risk-based access policies for frictionless access
- > Provide continuous, adaptive authentication/authorization
- > Offer Zero Trust as a service – never trust and always verify

The diagram above illustrates the stages of Zero Trust adoption. The goal for every business is to get to the highest stage across multiple factors that determine maturity. In addition to remediation, BeyondID offers ZTA as an ongoing service that will monitor KPIs and will provide a continuously evolving measure of where you stand with Zero Trust.
