SMS Gateway Service

Future-Ready SMS Gateway: Move **Fast**. Stay **Secure**.

As major Identity Providers (IdP) sunset native SMS services, we're ready to bridge the gap with a scalable, seamless, and invisible gateway built to keep your organization protected.

Why Migrate to BeyondID's SMS Gateway?

Whether you are moving away from Okta's deprecated SMS service or another provider, we handle the technical heavy lifting.

And, our partnership with Vonage ensures global reach and carrier-grade reliability.

- **Security First:** Maintain robust, SMS-based MFA to block unauthorized access attempts.
- **Reliability:** Guaranteed delivery of One-Time Passcodes (OTPs) through optimized downstream network configurations.
- **Total Visibility:** A dedicated SMS Service Portal to monitor usage data, line-item details, and service trends.
- **Proactive Support:** 24x7 infrastructure monitoring and regular service reviews with our Service Management Team.

Transition to Future-Ready SMS in Fewer Than 3 Hours

We've optimized our onboarding to be "low-touch." We handle the backend complexity so your team can stay focused on core operations.

1. **Strategic Kickoff:** (<1 hour) A brief discovery session to gather your technical environment details, confirm the number of IdP tenants, and align on the migration roadmap.
2. **Service Configuration & Testing:** (<1 hour) We execute the IdP configuration changes and perform live validation of SMS and Voice OTP delivery to ensure 100% functionality.
3. **Portal Onboarding:** (30-60 minutes) We provide a guided walkthrough of the SMS Service Portal, granting your team access to real-time usage data, line-item details, and troubleshooting tools.

BeyondID's SMS Gateway Service

Unlike some other providers, our support doesn't end at go-live. We act as your Tier 3 expert partner, allowing your internal teams to focus on core operations while we manage gateway stability.

After deployment, we transition into a proactive management phase, providing 24x7 monitoring and regular service reviews to review usage trends and ensure the service continues to meet your evolving requirements.

SMS Gateway	SMS API/Managed Service	
For All Organizations	For Workforce	For Consumer
An all-in-one solution managed and supported by BeyondID, perfect for SMB and Mid-Size organizations. This is the best option for those customers who need to bring their own provider, but do not have the time nor resources to manage additional authentication methods within their current platform.	This managed service is intended for international enterprise organizations with the need for higher volume and localized telephone numbers, hosted on AWS. 	Custom managed service based on your customer volume, daily average users, session details and load balancing requirements. 

Note: While primarily used for SMS, this service can also be configured to include Voice and other messaging channels depending on your needs.

Secure SMS, powered by  **VONAGE**
