How Much Is Your OneLogin Relationship Really Costing You?

Some companies have turned to OneLogin for Identity Access Management because it claims to offer the “same capabilities” as Okta at a much lower price.

But what are those “cost savings” really costing you?

Any software or technology system is only useful when it’s available and accessible.

OneLogin customers come to us for help migrating away from OneLogin because they need a reliable, stable, feature-rich solution to govern access to their most critical, revenue-generating systems. Downtime has serious implications for businesses,

In fact, we’ve helped a number of companies migrate away from OneLogin, even in advance of their contract renewals, because the issues they were facing with OneLogin were so urgent.

[Check out our Okta Success Stories](#)

Don't Let Your OneLogin Be a No Login

Access issues have long plagued OneLogin, and when customers and employees can't access your systems, it can cost your company real top-line revenue.

While OneLogin claims 99.4% uptime, third-party trackers and customer forums point to a different experience.

IsDown shows [48 down-time incidents](#) since May 2025. Many of these outages [lasted for hours](#), causing significant operational disruption.

OneLogin customers have not been quiet about it either, [complaining on Reddit](#) and other community forums about extended, major outages causing significant downtime.

The Risks of Staying with OneLogin

Security Breaches

Yes, it's been a while since the company's major security breach of 2017. But has OneLogin really made the investments necessary to ensure issues like this won't happen again?

Just last year a security researcher was able to sign-up for the company's free trial and move laterally into and through its multi-tenant production environment, accessing other customers' signing keys.

Are you confident that your identities are secure with OneLogin? If your company were to suffer an identity breach, what would be the cost to your business? Are you willing to take the risk?

Lack of Customer Support

Like most SaaS companies, OneLogin claims to provide "top-of-the-pack" customer support, but that's easier said than done. OneLogin's own customers seem to feel otherwise, reporting even greater degradation of support services since the company was sold to One Identity (Quest Software).

Multiple companies we've worked with to migrate away from OneLogin have told us not only have they experienced significant downtime with OneLogin, but that when disruptions occur, the company's support teams can't explain why it's happening or how they're going to resolve it going forward. Poor support places an undue burden on your internal team and wastes valuable IT resources that could be deployed in other value-added areas.

Migrating from OneLogin to Okta

Our Commitment: Seamless Migration in as Little as 12 Weeks

As long-standing Okta partners, KeyData Cyber and BeyondID have helped several major companies successfully migrate to Okta. Complex migrations are no problem for us. We have worked with global enterprises like Airbnb and H.E.B. to migrate hundreds - even thousands - of applications.

Our proven methodology offers predictable upfront costs and accelerated timelines with minimal downtime to ensure a rapid time to value.

Assessment & Planning

Define architecture and migration strategy

Data Extraction & Transformation

Data pulled, transformed, and validated

Okta Configuration

Build-out, policy setup, and data import

Phased App Migration

App prioritization and coexistence setup

Testing & Validation

UAT and coexistence checks

Cutover & Service Management

Go-live and ongoing optimization

If the hidden cost of your OneLogin relationship has you concerned maybe it's time to look at Okta.

- Okta has been recognized by Gartner for their leadership in the IAM space for 7 consecutive years.
- Okta consistently delivers 99.99% availability - your users won't get shut out.
- The Okta Identity Network has over 7,000 publicly accessible, pre-built integrations so you can make sure all the integrations you need are already there before migrating.

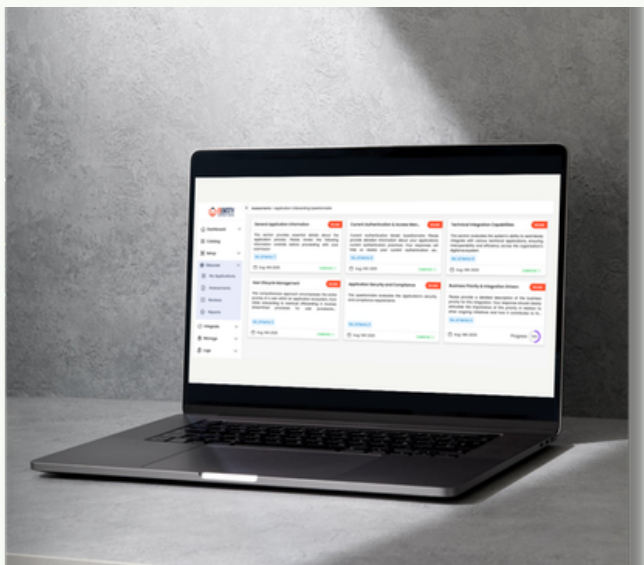

Unlocking Okta's Full Potential

Beyond migration, when you work with us, you're getting a partner in identity management that's there to work with you to protect your infrastructure over time.

Identity-as-a-Service

Our subscription-based identity security program delivers licensing, implementation, management and sustainment, making it a one-stop shop for comprehensive identity security.

Identity Command Center

Our Identity Command Center (ICC) is a customer platform for managing your identity maturity from the very first assessment to scaled transformation.

Beginning with your Digital Identity Blueprint, ICC tracks your journey through advisory, implementation, and management, giving you a continuous, bird's-eye view of progress, risks, and opportunities.

Our Okta Connectors

Our Okta connectors simplify complex integrations, reducing manual efforts and streamlining operations.

Looking for a connector to a tool that isn't listed here? Not to worry.

Our teams specialize in custom integrations and technology accelerators for seamless security across applications.

Success Stories

Modernizing Identity Management for H-E-B's 170,000 Retail Employees

Industry
Retail - Grocery

User Accounts
170,000

IAM Capabilities
WIAM

Tech Solutions Used
Okta

Challenge

H-E-B's workforce transformation was motivated by the inflexibility of the grocery retailer's current OneLogin system. For grocers like H-E-B, with 400 stores in Texas and Mexico, employing 170,000 people, staffing demands fluctuate throughout the year, making turnover and access management a major challenge.

H-E-B needed a more modern platform capable of rapid and precise lifecycle management, with secure authentication and authorization and timely onboarding and offboarding.

Solution

BeyondID served as H-E-B's trusted advisor and subject matter expert throughout their workforce transformation. This expert support was crucial for H-E-B's continued confidence as they pursued modernization through means unfamiliar to the organization's internal teams.

Their approach included:

Integrated Application Portfolio

BeyondID integrated all of H-E-B's existing applications into the new Okta platform, establishing seamless connections available to users at a single point of access.

Expert Okta Configuration

BeyondID's identity professionals led H-E-B through expert configuration of their Okta platform to ensure optimized access to all the tools and resources an Okta investment brings.

Strategic Advisory Services

BeyondID provided expert support and guidance to H-E-B's internal teams, ensuring a smooth transition to the modernized platform.

Outcomes

Enhanced User Experience

A new omnichannel workforce strategy enables users to move through all available applications seamlessly and from a single point of access. Employees now enjoy easy access and an exceptional user experience with secure registration and passwordless authentication.

Optimized Workforce Efficiency

Automating the lifecycle management process means employees are no longer responsible for the tedious process of onboarding and off-boarding an ever-fluctuating workforce. They also now enjoy simplified access to the full range of applications, tools, and resources they need.

Strengthened Security Posture

Leveraging Okta's best-in-class identity security features, the risk of security threats to H-E-B's new platform is low.

Future-Proof Digital Infrastructure

H-E-B is now equipped with new digital infrastructure capable of supporting any future integrations, a transformation to take H-E-B into the future.

Migrating Echo Global Logistics's Portfolio from OneLogin to Okta to Improve Security

Industry
Logistics

Apps Migrated
1,200+

IAM Capabilities
WIAM

Tech Solutions Used
Okta

Challenge

Echo Global Logistics is a transportation and supply chain management company providing global shipping services through its international air and ocean freight capabilities. They provide managed transportation, freight brokerage, and a wide range of logistics solutions including truckload, LTL, intermodal, and international air and ocean freight.

Echo Global Logistics needed to replace their existing OneLogin environment with a platform that enhanced their identity and security capabilities. The key challenge was the scale and complexity of moving their extensive application portfolio without disruption.

Solution

Platform Selection

Guided Echo Global Logistics in evaluating business needs and determining that a migration from OneLogin to integrated Okta Auth0 and WIC platforms was necessary to strengthen security.

Application Migration Methodology

Established a seamless migration methodology to successfully configure and integrate 1,284 applications with Okta.

Workday as Source of Truth

Leveraged Workday to serve as the reliable "source of truth" for identity information.

Active Directory Integration

Integrated the new Okta platforms with the client's existing Microsoft Active Directory platform.

Outcomes

BeyondID executed a fast and efficient migration, enabling Echo Global Logistics to immediately benefit from Okta's enhanced identity and security platform.

Rapid Deployment Timeline

The entire discovery, migration process design, and execution were completed in a 12-week program.

SSO Across All Apps

Achieved Single Sign-On (SSO) configuration across all 1,284 identified applications.

Strategic Platform Implementation

Successfully deployed a modern, cohesive identity and security solution built on Okta Auth0 and WIC.

Airbnb: Securing a Global Workforce with Okta Workforce Identity Cloud (WIC)

Industry
Hospitality

IAM Capabilities
WIAM

Tech Solutions Used
Okta

Challenge

Airbnb required a comprehensive platform to secure the identities of its thousands of employees and its entire environment. The primary goal was to modernize its legacy OneLogin workforce identity environment by migrating to a more scalable solution with advanced identity security and fraud prevention capabilities.

Solution

BeyondID was selected by Okta to partner with Airbnb to strategically deploy the platform and seamlessly migrate more than 600 applications from OneLogin to Okta Workforce Identity Cloud (WIC).

Digital Identity Blueprint

We established a clear, strategic framework to guide the migration and ensure the new identity program was aligned with Airbnb's long-term business and security goals.

Comprehensive Okta Implementation

We deployed a full suite of Okta modules, including Single Sign-On (SSO), Adaptive Multi-Factor Authentication (AMFA), and Lifecycle Management.

Enhanced Security and Compliance

We ensured the implementation of Conditional Access and Disaster Recovery enhancements to improve security and business continuity across the organization.

Outcomes

Optimized User Lifecycle Management

Automation streamlined the process of onboarding, offboarding, and updating employee access, significantly reducing manual overhead and increasing operational efficiency.

Vastly Improved User Experience

Employees now benefit from seamless and secure access to over 600 applications via Single Sign-On, eliminating password fatigue and boosting overall productivity.

Strengthened Identity Security Posture

The implementation of Adaptive MFA and advanced security controls provides a robust defense against identity-based threats and enhances the security of employee accounts.
