

# Epic Connectors

From our Family Company **BeyondID**

This Epic provisioning connector allows healthcare IT admins to use Okta to create, update, deactivate, and delete workforce accounts within Epic. With account sourcing set up in your IT environment, account changes in Okta or a Human Resources Information System (HRIS) connected to Okta will automatically be reflected in Epic and any downstream applications.

## EPIC Connector Benefits

**Streamlined Operations:** Our integration framework simplifies complex Epic Systems EMR integration processes, reducing manual efforts and the risk of errors.

**Enhanced Data Accuracy:** Achieve data consistency across your ecosystem by seamlessly synchronizing information on EPIC system and other systems like AD.

**Cost Savings:** Reduce operational costs by automating routine tasks and processes.

**Real-Time Updates:** Keep your data up-to-date in real-time, ensuring that all stakeholders have access to the latest information.

**Scalability:** Our solution is scalable, accommodating your business growth and evolving integration needs.

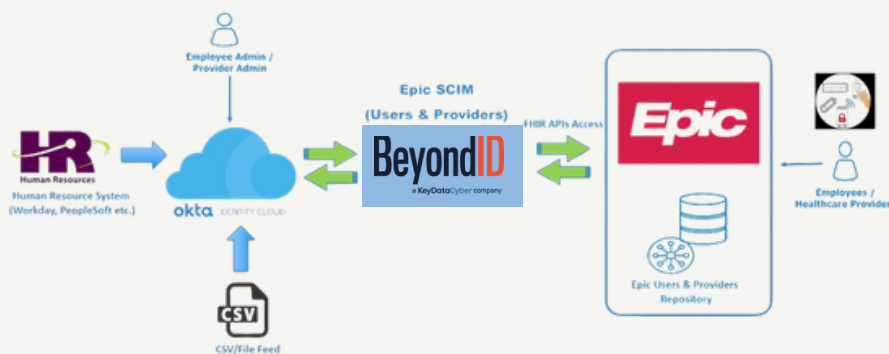

| Provisioning                                                                      | User Sync                                                                     | Templates                                                               | Deactivation                                                             | Support                                                      |
|-----------------------------------------------------------------------------------|-------------------------------------------------------------------------------|-------------------------------------------------------------------------|--------------------------------------------------------------------------|--------------------------------------------------------------|
| Provision and de-provision users and providers and link user with provider record | Near real-time data sync between the systems helps keeps your data up to date | Seamlessly manage user templates, sub-templates and provider blueprints | Centralized deactivation of user and provider per your business policies | Managed integrations provider for both on-prem and the cloud |

### Okta-BeyondID-Epic Secure EHR Solution
